

Armco Barrier Systems

Our Armco Crash Barrier Systems have been adapted to offer protection in a wide range of situations.

The barriers' versatility allows them to be used both inside and outside; they are extensively used in car parks, loading bays and factories to offer protection to the fabric of buildings, customers and workers from the hazards of cars, trucks and other vehicles.

Made from 3mm galvanised steel with a 3.2m effective standard beam our Armco Barrier systems are compliant with the requirements of BS6180 and BS6399.

Post Types

RSJ Type Legs

Available in both bolt down and cast in.

Z Type Legs

Available in both bolt down and cast in.
